

ISES 2018 | International School on Energy Systems

Training Course on Energy Systems for Young Researchers and Professionals

The International School on Energy Systems – ISES 2018 hosted by Forschungszentrum Jülich invites young researchers to discuss the challenges of present and future energy systems.

The program comprises presentations and discussions on the following subjects:

- energy technologies and energy efficiency
- energy security and energy policy
- energy economics
- environmental challenges and climate change
- assessment of energy technologies & systems
- future trends

These and other aspects of energy systems and the transformation process will be addressed by keynote speakers and discussed by the participants. The participants' research topics will be presented and discussed during a poster session which includes a poster award.

The goal of the school is to develop a deeper understanding of the challenges which concern today's and future energy systems as well as the necessity to manage a transformation process towards sustainability.

Participants MA and PhD students

Young researchers

Post-Doc fellows

Young professionals

Date August 26-31, 2018

Costs The course, food & accommodation are covered by the organizers of ISES2018.

Venue Kloster Seeon
Bavaria, Germany
